GAME DESCRIPTION

We know, being a cube all day sounds awesome.

While it might be hard to understand why would anyone wants more than that, our story begins with a Cube who is ready for an adventure through dimensions to find more to that. Will the Cube find what it seeks at the end of its journey and will you be there to help?

A Cube Story is a minimalist isometric puzzle/platform/story game where you can control a cube.

Cube will move on a grid based platforms. Main objective of the game is reaching higher dimensions by solving maze-like puzzles and avoiding obstacles & traps. Your reflexes must be quick and your mind must be awake to keep your loyal companion cube safe.

At the end of each level, you need to generate keys for the lock by combining your cube with the environment elements.

GAME / GAMEPLAY MECHANICS

Movement/Platform Mechanics

The cube can move around a grid-based platform. It moves one cell to another by rotating itself. Cube can avoid obstacles or move another area of the platform.

It has different movement mechanics such as jump and dash. By using these mechanics, Cube can go to different elevations on the platform or can jump over traps & empty grid cells. Our main goal is to design these mechanics to provide many unique levels with multiple strategies for players.

Merging Cubes

In the final stage of each level, there is a unique puzzle to solve. You need to recreate the required key layout by merging other cubes with your cube. After creating the layout, you need to place the cube heap correctly to unlock the next level. The relationship between unlock condition and your cubes is like key and keyhole.

Rewind

At some point through the game, Cube will acquire a rewind ability. When failure or some satisfying condition occur, cube will be able to rewind time. Rewind ability can be used to free the cube from difficult situations, progress through the level, solve the puzzles.

Progression/Story

The story starts with Square that is stuck into 2 dimensions, finding a way to 3 dimensions. As the game progresses Cube acquires new skills and uses them to complete levels and reach higher levels of reality.

Intro level

First chapter

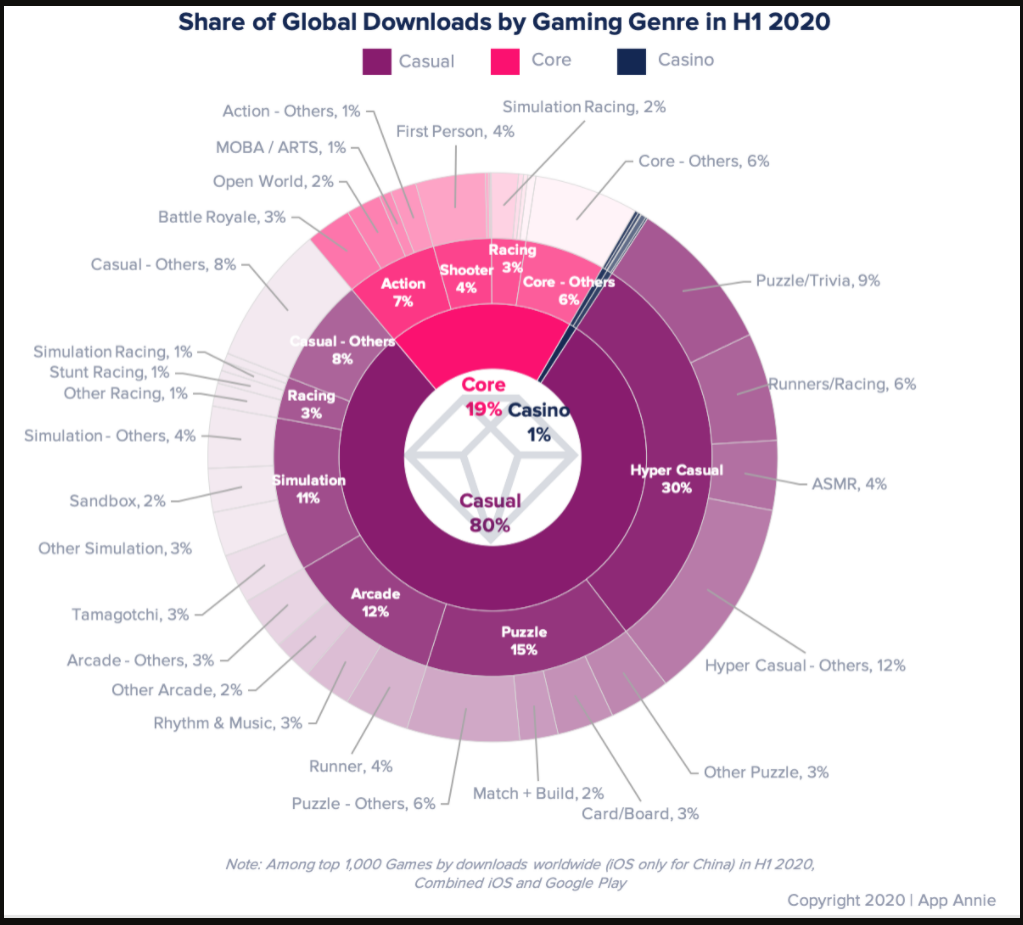

Second chapter

Final chapter

We plan to achieve a unique gameplay experience by improving the way environment and Cube look in each chapter. We will also keep the player informed with narratives and tutorials as the new skills are unlocked and story progresses.

MARKET POTENTIAL & TARGET AUDIENCE

Our target audience is minimalist puzzle/platform game, story lovers. We aim to entertain people who likes to solve both calming, mind exercising and reflex based puzzles while following a innovative story.

Facebook Gaming reports that puzzle games are the most popular genre in US and UK with more than 60% of players. In South Korea, puzzle games are the second most popular genre with 45% of players.

Revenue share by country are given by 27% of revenue in the US, 24% in the UK, 7% in Japan, and 6% in South Korea.

One of the most popular puzzle game Portal 2 is released in 2011 and sold 10-20 million copies. The potential of puzzle games is shown by this example.

Sliko and Breezeblox are minimalist puzzle-platformer games which arebased on moving cube/cubes and solving puzzles on a platform. Both of these games have sold 20-50 thousand copies. The Last Cube is a game where player makes cube move/jump/dash to solve puzzles which is planned to release in 2022.

Since all of these games have some similarities to our game, our game will try to combine both of these mechanics, wrap them with a good storyline. Thus, we aim to provide more diversified and unique puzzle experience.

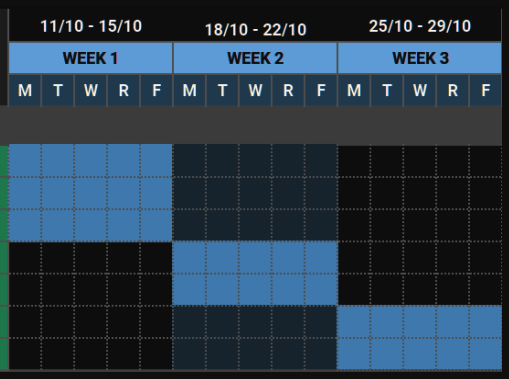

INNOVATION & CREATIVITY

A Cube Story aims to create a unique gameplay experience by balancing challenging gameplay elements which satisfies both the platform and puzzle loving player and a minimalist story that gives purpose to the play.

Cube based puzzle and platform games have players across all ages. Although it is satisfying and fun to play these games, playing the same mechanics over and over and seeing the same environment without feeling any progress or purpose are the downsides. We plan to outrun these through a storyline that is minimal but fullfilling enough to keep the player's attention. Also, we will be introducing new mechanics, changes in the environment and art style during the whole gameplay in order to make the player feel progress and purpose. This will enable us to keep the player continue playing the game. By giving the Cube a personality and a story, we believe players will feel attachment to the Cube and want to see the end of the game.
